DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1-13 and 22-32 rejected under 35 U.S.C. 102(e) as being anticipated by Peckover.

Peckover shows, figures 1, 2, and 19, "a system for electronic commerce (10) having personal agents (12 and 13) that represent consumers and providers in a virtual marketplace (28). Consumer personal agents conceal the identity of the consumer and are capable of creating decision agents (14) that shop for products and assist consumers in comparing and ranking products." (abstract)

Art Unit: 3627

"A Query 106 describes the product or product category for which to search.

Query 106 includes data from Product Template 174 completed by the consumer and relevant data from the consumer's preferences, as assembled by Decision Agent Factory 76 of the consumer's Personal Agent 12. A Response Manager 108 receives search results and returns them to the consumer's Personal Agent 12. A Log function 110 stores records of the activities of Decision Agent 14. These records may be consulted later, for example, by a Demand Agent 16 that is calculating historical demand for a product." (column 21, lines 57-67)

(selecting one or more product/service criteria – product template)

(at least one of said selected product/service criteria as a ranking parameter by a

consumer – consumer's preferences)

(storing said selected product/service criteria and said ranking parameter is said database, thereby providing market research data – log function 110 stores this data, which is used for calculating historical demand.)

"Referring now to FIG. 5A, each preference datum 68 comprises not only a value 72, but also a key 70 for ease of searching. Referring to FIG. 5B, a small sample of preference data illustrates the kind of data that might be used. A particular user typically will have much more preference data. Some values are shown as "rank m in n" to illustrate that ranking data may also be stored." (column 19, lines 22-28)

(The above shows how personal agent 12 incorporates ranking parameters in the search criteria and the stored data. Note figure 5b, weight lifting, rank 1 in 10; stair climbing, rank 3 in 10; and swimming 10 in 10)

Art Unit: 3627

"Referring to FIG. 11, an overall method according to the present invention for searching for a product is referred to generally by reference numeral 220." (column 27, lines 66-67)

"Agents and other components operating in Agent Marketplace 28 have access to a Product Database (Product DB or PDB) 32. " (column 17, lines 8-10)

"One of the major consumer uses of Agent System 10 is to assist a consumer in locating information about a product that is advertised for sale." (column 27, lines 52-54)

"PDB 32 maintains generic data about products, to be referenced by ads placed by providers." (column 25, lines 44-45)

(The above shows searching a database connected to said network for products or services. It also shows searching in a connected advertisement database.

Figure 16 also shows a search process. Matching the products or services closest to the criteria is an inherent feature of the basic search engine.)

Figure 19 shows search results process. Step 364, the preference manager organizes results according to consumer preferences.

(The above shows displaying a list of products or services satisfying ..., said list being ordered in accordance with ranking parameter. Also, controlling the display)

Art Unit: 3627

"Referring now to FIG. 12A, there is shown a method for a Compose Decision Query subroutine, referred to generally by reference numeral 228. If the consumer wishes to specify a search that is similar to a previously performed search, Decision Agent Archive 80 displays a list of search queries from expired Decision Agents from which the consumer may select (steps 242-246)." (column 28, lines 17-23)

(The above shows how to enter one or more new or additional product/service criteria by said consumer.)

Figure 20 shows the expire decision agent subroutine, which includes step 382, archiving expired decision agent. "Referring to FIG. 20, an Expire Decision Agent subroutine is referred to generally by reference numeral 372. When a Decision Agent is expired, Expired Decision Agent Manager 154 logs the expired Decision Agent (step 378) so that Demand Agents can easily search through the expired Decision Agents of this market when calculating historical demand." (column 30, lines 55-62)

(The above shows storing said selected products or services in said database as market research data of consumer preferences.)

"Within Agent System 10, preference data also includes "demographic" data.

Demographic data indicates facts about the user, such as whether the user is a homeowner, the user's gender, the user's age group, etc." (Column 19, lines 6-8)

(The above shows receiving information about the physical characteristics of said consumer – gender being a physical characteristic. It also shows generating an image of said consumer – demographic profile being an image.)

Art Unit: 3627

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael Cuff whose telephone number is (703) 308-0610. The examiner can normally be reached on 8:00 to 5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert Olszewski can be reached on (703) 308-5183. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
